- Phase 1 and Phase 2 Method statement IAPS
- Ecology Clerk of Works during removal of IAPS

Veon Ecology offers ongoing monitoring and management advice across a range of commercial and agricultural industry sectors to help our clients meet increasingly stringent approval requirements when assessing the impact on biodiversity.

Our ecologists are highly experienced in working as part of project teams with engineers, hydrologists, hydrogeologists, environmental scientists and others, and are engaged in projects covering impact assessments, natural resource management and wildlife monitoring. These include the design and implementation of cost-effective surveys and reports which assist in achieving project approval from relevant government authorities and regulatory bodies.

Veon ecologists are committed to identifying and creating solutions for our clients to protect, enhance and monitor biodiversity values, and avoid or mitigate any potentially negative impacts predicted to arise from proposed architectural activities.

Veon Ecology is dedicated to ensuring that all activities follow best practice in compliance with environmental legislation. By working with our clients, Veon Ecology's vision provides a quality service that is practical, sustainable and professionally accredited.
